Instrument Maintenance Tips

How to take care of your Juma Instrument(s):

1. Do not leave the instrument in wetness, rain or direct heat/sunlight because it can damage the instrument.
2. Regularly put a little bit of petroleum jelly (like vaseline) on the metal keys especially on the tips. It gives more playing comfort and slows down any rust.
3. Handle the instrument carefully as dropping or bumping may move the keys and affect the tuning.
4. How to adjust keys that have moved out of position: put a flat screwdriver at the top on the side of the key where it is touching and with a small hammer tap the back of the screwdriver gently until the keys are apart.
5. For more info about maintenance and tuning of your instrument visit our website: www.kalimbashop.com.

You are welcome to contact us with any questions regarding maintenance or tuning of your Juma Instrument via email info@kalimbashop.com.

Musical greetings!
